## Twitter Emotional Word Analysis

As a former Preschool Teacher, part of my ongoing education was to gain more credentials in Early Childhood Education which led me to focus on a key developmental milestone: Social and Emotional Skills.

Learning this subject matter and how to utilize tools for teaching my class was the catalyst for my new found interest and hobby in emotional intelligence and human behavior.

Over a person's life, new experiences shape social and emotional skills like a ripple effect in water. Thus, my curiosity in how Twitter users express themselves on the social media platform.

*“Emotions drive learning, decision-making, creativity, relationships, and health.”*

# Data Questions

## Twitter Emotional Word Analysis

- What types of emotions do Twitter users tweet about more often?
- Do users have a wide emotional vocabulary for describing their feelings?
- Does the type of emotional expression affect the length of a tweet?

# Data

## Twitter Emotional Word Analysis

- Used the Twitter API to pull 25,010 tweets.
  - Before pulling the tweets:
    - the text was filtered by common words such as 'of', 'to', 'be' and/or 'have'. Sensitive language and hashtags were also filtered out to avoid pulling certain offensive content.
    - The tweets had a date and time parameter of April 19th 2021 T12:30:00Z, UTC time zone.
    - Tweets were pulled in reverse chronological order until meeting the condition of 25,000 tweets. It took a mere three minutes for Twitter users to tweet that much data.
    - The resulting data frame was 25,010 rows and 9 columns.

# Everything considered

- Twitter users often tweet relatively more pleasant messages than difficult ones.
- It is ambiguous if users have a wide emotional vocabulary for describing their feelings. There are 3,000 English words to express emotions, and only 240 words were used to analyze the tweets.
- Regarding the lengths of tweets, the type of emotional expression affecting the word count is questionable. However, the Difficult category did have more words per tweet on average than the Pleasant category.
